What is NSF funding abbreviation?
A NSF (National Science Foundation) is a financial organization established by the federal government of the United States that supports and encourages research, education and innovation in science and engineering in the U.S. Among other things, NSF has an important role in certifying the effectiveness of water filters, ensuring efficiency and effectiveness in the removal of contaminants.
Since 1944, NSF has supported innovative research in 650 different areas of knowledge in the United States, contributing significantly to academic and technological progress globally. The mission of NSF is to promote the development of research and invest in solutions and technologies aimed at the progress of the 65 different regions of knowledge, including the main branches of engineering.

NSF and its Water Filtration
A NSF is a moldable of different types of standards in water filtration and effectiveness, ensuring high fidelity and quality in the filtration process of water. This makes water safer for consumption and use, especially for vulnerable groups such as newborns and the elderly.
