In probability theory, a martingale is a sequence of random variables (i.e., a stochastic process) for which, at a particular time,

the conditional expectation of the next value in the sequence is equal to the present value, regardless of all prior values. Stopped Brownian motion is an example of a martingale.

How does the martingale work? Martingale puts pressure on the reins and horse's mouth when the animal wants to raise its head too high

. This mechanism forces the horse to put its head down. In comparison to other

similar equipment, martingale has a mild effect on the horse.
