Software-generated random numbers only are pseudorandom. They are not truly random because the computer uses an algorithm based on a distribution, and are not secure because they rely on deterministic, predictable algorithms.

Software-generated random numbers only are pseudorandom. They are not truly random because the computer uses an algorithm based on a distribution, and are not secure because they rely on

deterministic, predictable algorithms.

But good random number generators don't have any clear pattern to their output,

making finding which

the size of the codebook that algorithmic random number generation can support.
