Given odds against of an event say A is give to be 7 : 2, therefore probability of winning with The $P(A) = \frac{2}{(7+2)} = \frac{2}{9}$ and probability from the happening of A is $\frac{7}{9}$. If it is as in favor of A, the probability of B is $\frac{2}{9}$.

In the world of Portuguese football, there are exciting derbies that are loved by the fans, and the Derby of the North between SC Braga and Vitória de Guimarães is one of them. Although it is not recognized internationally as much as other classics, the fervor involved deserves a highlight.

It was inaugurated in 1922 and, since then, there has been an intense rivalry between the two teams for supremacy in the north of Portugal. Located in the same region, the two cities are separated by only 45 minutes by car, intensifying the conflict.

More than two teams, on each side, there is a real community that keeps this dispute alive. The games between the two clubs move not only one city, but two, as the fans travel to Guimarães for Braga and vice-versa to cheer the games. All this without counting on the live transmissions on television, with a large number of spectators accompanying the game from their homes.

SC Braga and Vitória de Guimarães are both important in the Primeira Liga. In the current table, they are among the six clubs of the North, one of the great rivals and winners of two direct confrontations: SC Braga and Vitória de Guimarães.

This derby is far from being just a friendly game; for many, it is a game of honor, prestige and ambition. Moreover, SC Braga, along with the great Benfica of the last season, is one of the most successful clubs in Portuguese football, this symbolizes a rise in the competition.

The confrontation faces the statistics:
