The steelwork was prefabricated as a series of 👄 portal frame s that were craned down the alley and site-welded together. Given that every inc h in such a narrow space 👄 was valuable we chose to fully weld the conn ections and express the frame internally, even utilising the depth of the Ԁ 68; steels to maximise the space.</p> <p>Alongside the painted steel a simple palette of spruce plywood, douglas fir joists, terrazzo and cork 👄 flooring enriches the interior. Extern ally the timber framed walls are clad in handmade pewter glazed brick slips with a patina 👄 that reflects the changing light of the sky. Both the simple y landscaped and planted rear courtyard and the garden in 👄 front of the e house enhance the feeling of space in this small dwelling.</p> <p>This self-build project had a long gestation, fitted 👄 in arou nd professional and family life. The design and construction were developed as t ime and money allowed so whilst planning 👄 consent was given in January 2014 and the ground works commenced in the spring of 2024, the building was not 👄 completed until August 2024. We worked closely with friend and joine r Michael Tye to lead a small team of local 👄 subcontractors and employ ed specialist fabricators for certain key packages as well as undertaking a fair amount of the work ourselves.</p> <p>The 👄 result is a unique and highly crafted home that is a tes tament to the commitment, effort and support of many 👄 people. By repla cing a narrow disused alley with this comfortable small home we hope to have enh anced the streetscape we 👄 inhabit. As the building completes the terra ce, so does the front garden - with the simple bin store, planting, level Ԁ 68; access and bike parking we aimed to keep it open and reinforce the pavement line without making a hard boundary. 👄 The development highlights the viability, both economically and spatially of small brownfield sites to provide high quality sustainable development at 👄 a time of housing shortage. W

e see it as a model for other seemingly undevelopable urban gap sites where the
